January 2019 — May 2019 Philadelphia

LEADERSHIP

Development for STEM Women

A six-month professional development program that supports career development and advancement of women in STEM through a combination of workshops, peer group mentoring and individual coaching.

The program is offered through STEM-UP NETWORK, dedicated to increasing the representation, retention and advancement of women in leadership in STEM fields.

Our highly successful program was originally developed at Rutgers University, and was adapted to meet the needs of faculty, business and government professionals in our region. STEM-UP NETWORK is powered by Harrisburg University of Science & Technology.

Develop Leadership Skills and Broaden Your Social and Professional Networks!

Workshops are held Fridays from 10am—3pm Lunch is provided

- One-on-one coaching conversations to focus goals and resolve challenges.
- Networking with program participants and others in our growing network.

Why

Develop leadership & self-advocacy skills. Learn techniques to move your work forward more effectively, and broaden your social and professional networks.

Program Fee $1,250.00

Leadership Development for STEM Women

What Others Are Saying

A Social Enterprise Powered By

"I recommend to my other female STEM friends that they should check this program out, because it has made a lasting difference for me."

"The training and support I received through the Leadership Development for Women in STEM program opened my eyes to new leadership opportunities within my discipline. As a busy female scientist, I don't have a lot of time to pursue networking opportunities, even if I knew where to find them. The program has allowed me to learn that networking with other scientists is in fact central to staying sane, that negotiations should not be feared but embraced, and that I have a particular style of leadership that strengthens and complements those of other types of people. I made friends, laughed, and continue to be reminded of ideas on how to approach new challenges."

"Thank you STEM-UP for introducing me to these amazing women!"

"LDWS provided me with a network of STEM women in my region. Their support and diverse perspectives have been invaluable when I have had to deal with issues at my own organization."

"I highly recommend participating in LDSW."

"Especially at smaller organizations it is hard to have a sense of community when there are so few STEM women. The workshops and goal setting were beneficial, but the support from the community of women sharing their experiences, ideas, and challenges has been invaluable for my career."

"The program was well-organized and recruited high quality presenters to work with us."

"I was anticipating mentoring and networking opportunities in the program and I was not disappointed. I have made some great connections with others locally that I did not have prior to the program. The greatest benefit to me however was in areas I did not expect, the sessions on negotiation and in leadership were very powerful and come into play in my job much more readily than I would have thought."
